**The Confidea®**

Wireless System offers:

- Multi-band capability
- Robust & Reliable wireless link
- Easy battery management
- Simultaneous interpretation
- Voting
- Quick set-up and tear-down

# State-of-the-Art Wireless Technology

## Wireless Conferencing with total confidence

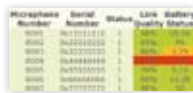

Televics' decades of experience in conferencing networks combined with state-of-the-art wireless transmission technology results in an extremely reliable and robust wireless connection, overcoming the major drawbacks of conventional wireless conferencing products.

Having a much wider bandwidth at its disposal than any conventional wireless conference system and using intelligent spectrum management algorithms, Confidea® can operate reliably in environments where other wireless products such as wireless LAN, Bluetooth etc. are in operation.

Even when the spectral conditions of the environment change, Confidea® continues to offer reliable communication - on the fly! So no need to worry about conditions that change between the time of set-up and actual use of the system.

---

## Autonomy and Battery monitoring

Microphone Number	Serial Number	Status	Link Quality	Battery
0001	0000000000	OK	100%	100%
0002	0000000000	OK	100%	100%
0003	0000000000	OK	100%	100%
0004	0000000000	OK	100%	100%
0005	0000000000	OK	100%	100%
0006	0000000000	OK	100%	100%
0007	0000000000	OK	100%	100%
0008	0000000000	OK	100%	100%
0009	0000000000	OK	100%	100%
0010	0000000000	OK	100%	100%

The Televic Confidea® has been designed for optimised power consumption. Equipped with a high capacity Li-Ion battery Confidea® offers an autonomy of at least 20 hours. In operation, the battery health of each delegate unit can be monitored from a central location via the web server integrated in the access point. The condition of spare batteries can be checked on the battery itself, eliminating the need to plug it into a monitoring unit to verify its status.

---

## Simultaneous translation and voting

Televics' Confidea® is the most versatile wireless system around. Additional to the basic discussion functionality, it also offers voting and simultaneous interpretation. The latter with up to 16 language channels, all conveniently transmitted over the wireless link

---

## Security

The information exchanged over the wireless link is totally secure. The use of encryption algorithms and access lists, allowing to monitor which units are 'on-line', eliminate the risk of eavesdropping in meetings where absolute confidentiality is a must.

---

## Stand-alone

For a simple discussion application, the Televic Confidea® can operate as a stand-alone system, using the Access Point as central unit. The built-in webserver allows to configure the system using a standard web browser.

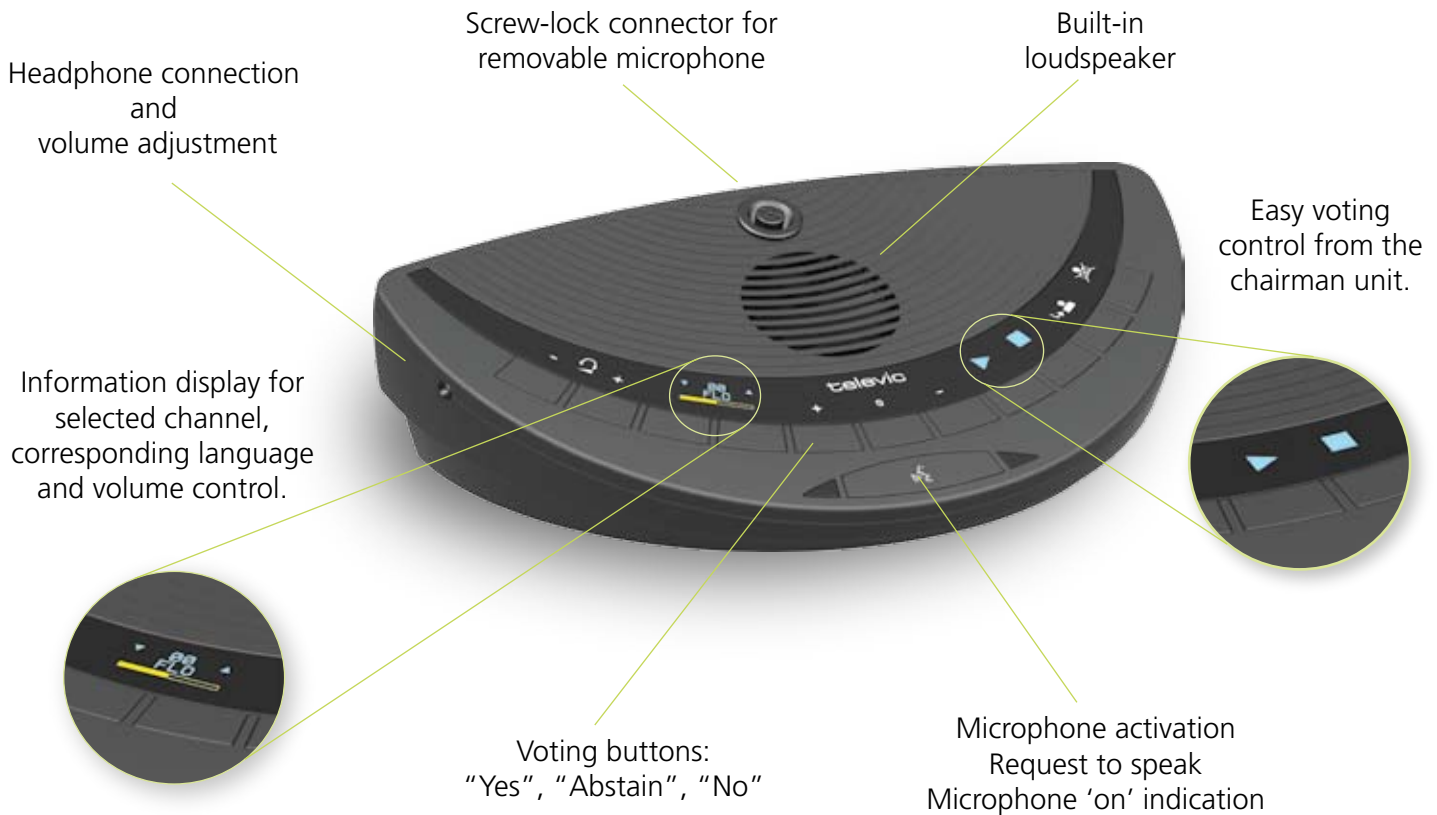

---

## Compatibility

Connected to a TCS2500 or TCS5500 system, Confidea® is fully transparent, allowing wired and wireless units to be used together in one installation. The Televic Confidea® is therefore the ideal solution for temporary or permanent extensions to existing Televic installations.

# The most complete solution for Wireless Conferencing

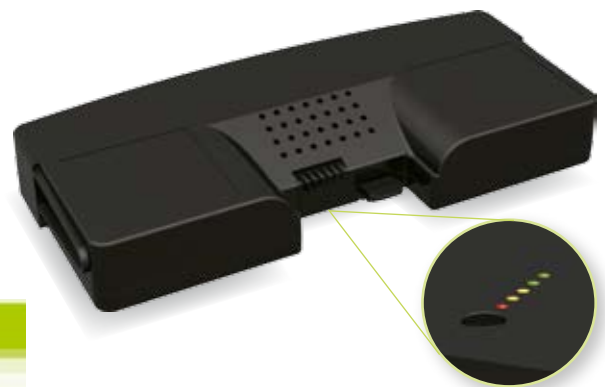

## Access Point

The Confidea Access Point is the central point of communication for the wireless system. It can either be used stand alone for smaller basic discussion systems, as well as connected to a TCS2500 or TCS5500 central unit for larger installations with voting and simultaneous interpretation. Thanks to the on-board Web server and integrated LAN port all RF-settings and basic conference settings can be controlled from a simple internet browser.

## Battery Pack

The battery pack uses Li-ion cells which guarantee a long life without the inherent degradation of battery capacity of other rechargeable batteries. The microprocessor controlled charging allows recharging without the need to discharge first.

Via a regular web browser, the battery condition of each unit in operation can be monitored, avoiding any surprises. A push button and LED bar indicator on the battery allows checking its condition without having to plug it in to a unit.

## Discussion

Confidea DD - for individual use

- Microphone activation button
- High quality loudspeaker
- Two headphones connections with single volume control
- Chairman version (Confidea CD) equipped with priority and next-in-line button

Confidea D2D - for twin use

- Microphone activation button
- High quality loudspeaker
- Two headphones connections with individual volume controls.

## Simultaneous Interpretation

Confidea DI - for individual use

- Microphone activation button
- High quality loudspeaker
- Two headphones connections with single volume control and channel selector.
- One OLED information display
- Chairman version (Confidea CI) equipped with priority and next-in-line button

Confidea D2I - for twin use

- Microphone activation button
- High quality loudspeaker
- Two headphones connections with individual volume controls and channel selectors
- 2 OLED information displays

## Voting

Confidea DV - for individual use

- Microphone activation button
- High quality loudspeaker
- Two headphones connections with single volume control
- Three voting buttons
- OLED information display
- Chairman version (Confidea CV) equipped with priority and next-in-line button
- Chairman can start and stop voting from the unit
- Chairman has two OLED information displays

## Full Function

Confidea DIV - for individual use

- Microphone activation button
- High quality loudspeaker
- Two headphones connections with single volume control and channel selector
- Five voting buttons
- OLED information display
- Chairman version (Confidea CIV) equipped with priority and next-in-line button
